JAHIN HABIB

CQL ALUMNI

Technology Engineering Analyst at Accenture Federal Services

WORDS OF ADVICE

Just do it. You will not regret it! Not only is it a door to gaining research experience, but it is a door to the wealth of knowledge among your future mentors, co-workers, and supervisors.

The people that you will be working with are unbelievably smart and helpful—they will guide you to where you want to be.

BEST THINGS ABOUT THE PROGRAM

There were so many great aspects to being a part of AEOP—contributing to real-world projects, interacting with some of the top professionals in the field, and coming out with valuable research results was an overwhelmingly rewarding experience.

AS A RESULT OF THE PROGRAM

Participating in government projects opened my eyes to how many problems still lie in this world. When my summer started, I was dreading going back to school, opening up the books, getting back to studying, and taking exams. After having such a great experience at the CQL program, I was more motivated than ever to go back to school and apply the skills I learned over the summer in my coursework. I finished the semester in full force and was excited to get back to work and help in solving some of the world's biggest problems.

HOW PARTICIPATING IN AEOP INSPIRED YOU TO ADVANCE IN STEM

My mentors went above and beyond to make sure I had the best internship experience at AEOP CQL. They even helped me publish my first technical paper! The people that you will be working with are unbelievably smart and helpful—they will guide you to where you want to be.
