## DEEPIKA

### JUNIOR SCIENCE AND HUMANITIES SYMPOSIA (JSHS) ALUMNI

Majoring in Neuroscience at Harvard and conducting research on Alzheimer's disease at Brigham and Women's Hospital.

## WORDS OF ADVICE

After you have completed all your hard work and research, make sure you present your ideas in a way that an audience who is not familiar with your field can still answer it.

## BEST THINGS ABOUT THE PROGRAM

The best thing about JSHS is the opportunity to meet others who share a passion for using science to solve real world challenges. I am still friends with students who I met at JSHS!

## HOW PARTICIPATING IN AEOP INSPIRED YOU TO ADVANCE IN STEM

Participating in JSHS inspired me to continue advancing in the STEM field by giving me a platform to share my scientific research and providing me with an opportunity to interact with other young science enthusiasts.

## WHO IS YOUR FAVORITE STEM ROLE MODEL?

My peers are my #1 role models because everyday I see how hard they work at tackling some of the biggest scientific questions of our time.

## WHAT ARE YOUR FUTURE HOPES AND DREAMS?

To develop treatments for neurological disorders, directly improve the lives of patients as a doctor, and impact global health on a larger scale through policy.
